AHNJ On the Go: AmeriHealth New Jersey's enhanced Mobile App

[View online](#)
[Forward to a friend](#)

We have updated our Mobile App in response to user feedback and customer requests, enhancing the functionality and overall experience. AHNJ On the Go iPhone and Android applications are convenient, fast, and secure, and provide easy access to the health information members need most—right on their cell phones.

Why did we update it?

Mobile applications have become increasingly effective in reaching people and helping them make smarter health care decisions.

The new features and functionality of AHNJ On the Go give our members the ease and convenience of managing their health plans with some of our most popular online tools, all in the palm of their hands.

What changed?

We made a number of enhancements to help make members' interactions with AmeriHealth New Jersey and their physicians easier, more productive, and timely. Our new mobile technology provides members with a robust suite of health management tools to help them make better health decisions on the go.

Plan Information

Subscribers and dependents can quickly access basic benefits information such as co-pay amounts, and contact information for their primary care physician and ancillary medical providers.

“Finders”

These robust search engines help locate hospitals, doctors, Patient Centered Medical Homes, urgent care centers, and pharmacies.

Doctor's Visit Assistant

Members can achieve a more productive office visit by preparing for the visit beforehand:

- Display, email, or fax an ID card to the provider.
- View open referrals.

- Record notes for the conversation with a physician, and capture documents or pictures.

Primary Care Provider (PCP) Info

Members can easily keep track of their Primary Care Provider's name, phone number, and designated sites all in one location.

Shop for Insurance

Make purchasing new insurance policies as easy as possible by learning about AmeriHealth New Jersey's plans and what is new with the Health Care Law.

My Health Assistant

Members can set health goals, and then build an activity plan to get and stay healthy. Trackers help monitor progress and manage the plan on the go.

Medicine Cabinet

Fed from claims data, members can view and keep track of all their medications and identify them with pictures.

Medication Reminders

Set daily or weekly reminders to take different medications.

Food & Drug Interactions

Check current medications for potentially dangerous combinations with foods or other medications to avoid complications.

For more information, please review the [press release](#), [Frequently Asked Questions](#) or contact your AmeriHealth New Jersey broker representative.
