

Important Security Note from Martin Insurance Group

Last week, a security vulnerability named the Heartbleed Bug was disclosed. This vulnerability affected the Internet's most commonly used encrypting technology and had the potential to allow encrypted data to be exploited including passwords and protected information.

Martin corrected the issue the moment the vulnerability was announced. We have fully tested our website and security systems. There are no residual security issues on Martin systems.

Out of an abundance of caution, we advise that all brokers reset their passwords to their MIG Dashboard accounts for privacy and security purposes as well as any passwords you have for banking, credit, and personal information available.
